

Welcome to FiberMedia

**FiberMedia™ owns and operates a network of data centers and offers scalable managed services that address every critical data management and transport function.**

Colocation space, along with fully-managed data center operations are available within our secure, carrier-neutral facilities. We provide turnkey data storage, business continuity & disaster recovery solutions as a safe and affordable alternative for our customers' functional remote data center operations. Our design/build division performs complete development services to create new data center facilities tailored to our customers' requirements.

INFORMATION  
SOLUTIONS  
FOR THE  
CONNECTED  
WORLD

**Our design/build division performs complete development services to create new data center facilities tailored to our customers' requirements.**

Our geographically-dispersed network of hardened Data Centers are engineered to comply with the most demanding standards and operated in accordance with industry best practices to securely house a diverse group of computing, storage, recovery and application server activities. These mission-critical facilities also create a 'marketspace' to promote profitable exchanges in every direction for service providers and businesses alike.

Our Managed Services provide an expansive alternative to companies for which information technology is not a core competency; and include end-to-end solutions that allow our customers to meet their legal and fiscal requirements to properly protect, distribute, store and recover critical business data.

FiberMedia works across a wide range of industries and companies, from publicly traded, multi-national Fortune 500 organizations to family owned, regional SMB companies.

FiberMedia was founded by CEO Michael Roark and grew from his prolific group of design/build/development companies that have constructed over six hundred projects the past twenty-five years including industrial, telecommunication and medical facilities, buildings, commercial offices, and public works projects.

**FiberMedia** has also developed, designed and built for technology-oriented companies in the US and abroad for over 20 years. Related to the construction of mission critical facilities and specialized projects, we offer a set of turn-key Design/Build services that include site survey & feasibility, planning, programming, real estate Services, development, design, engineering, construction and facilities management.

**FiberMedia... focused data services that allow our clients to stay focused on their core business with confidence.**
